Professional Summary

Aspiring Software Engineer with an Integrated M.Tech in Software Engineering (2026) and internship experience at Nokia in Java backend development, software testing, and DevOps. Seeking an entry-level software engineering role to apply my skills, contribute to impactful projects, and grow as a software professional.

Technical Skills

Programming Languages: Java, Python, C++, C, SQL
Backend & Web Technologies: Spring Boot, FastAPI, REST APIs, React.js, Node.js, Express.js, HTML, CSS
AI & Machine Learning: Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Prompt Engineering, ChromaDB, Vector Search
Databases: Aerospike, PostgreSQL, MySQL, MongoDB, ChromaDB
Testing, Quality & DevOps: JUnit, JaCoCo, SonarQube, Docker, Git, Maven, Gradle
Core CS Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Concurrency, Debugging
Tools & Platforms: Linux, Shell Scripting, JIRA, Postman, VS Code, IntelliJ IDEA

Education

Integrated M.Tech (B.Tech + M.Tech), Software Engineering *2021 – 2026*
Vellore Institute of Technology, Vellore
- Graduation Year: 2026 | CGPA: 7.88

Higher Secondary Education *2019 – 2021*
Narayana Junior College, Madhapur, Hyderabad
- Percentage: 92.8%

Secondary Education *2018 – 2019*
Dr. KKR's Gowtham Concept School, Hyderabad
- GPA: 9.0

Experience

Software Engineering Intern – Nokia, Bangalore *Aug 2025 – Jun 2026*
- Resolved **SonarQube**-reported code quality issues by fixing bugs, eliminating code smells, and improving maintainability across Java-based application modules.
- Executed UTMT (Unit and Module Tests), analyzed execution logs, investigated test failures, and resolved configuration and application-level defects to improve test stability.
- Designed and integrated **JaCoCo** code coverage support into a Docker-based build pipeline, enabling automated coverage report generation as part of the testing workflow.
- Improved code coverage reporting accuracy by analyzing zero-coverage packages, configuring exclusions, and validating coverage metrics for meaningful quality assessment.
- Enhanced system observability and reliability through logging improvements, root cause analysis, and investigation of race-condition-related issues in concurrent application workflows.
- Contributed to security compliance initiatives, including BPT, Anchor Tag, CIS-CAT, and EOL remediation activities by upgrading dependencies, fixing file permissions, and addressing security findings.
- Worked extensively with Docker containers, Linux environments, Gradle builds, and Shell scripting to support application development, testing, and deployment activities.
- Collaborated with senior engineers to debug software defects, analyze application behavior, and implement fixes that improved overall software quality and system stability.

Projects

Weather Forecasting Application *Java, Spring Boot, REST APIs, JSON*
- Built a Spring Boot backend integrating the OpenWeather API to serve real-time forecast data via REST endpoints.

House Hunt Application *React.js, Node.js, MongoDB, REST APIs*
- Developed a full-stack rental property platform with search and filter functionality using the MERN stack.

WasteScan: Automated Waste Sorting System *Python, OpenCV, Arduino*
- Built a real-time computer-vision waste classification system integrating OpenCV with Arduino-based sorting hardware.

CodeForge AI: Full-Stack AI Developer Platform *React, TypeScript, FastAPI, PostgreSQL, ChromaDB, JWT, Docker*
- Architected a full-stack AI developer platform with 6 AI-powered modules (code generation, documentation, code review, repository analysis, RAG chat, and project management) using React, TypeScript, FastAPI, and a layered service-oriented backend.
- Built a Retrieval-Augmented Generation (RAG) pipeline using custom chunking, sentence-transformer embeddings, ChromaDB vector search, and LLM integration for natural-language codebase Q&A.
- Engineered secure authentication and repository ingestion with JWT, bcrypt password hashing, ZIP/GitHub import, zip-bomb protection, per-user workspace isolation, and PostgreSQL-backed persistence.
- Containerized the complete application with Docker, enabling reproducible local development, multi-service deployment, and scalable backend/frontend/database orchestration.

Certifications

- Azure AI Fundamentals – Microsoft
- Full Stack Developer (MERN Stack) – SmartBridge, MongoDB Smart Internz
- Data Science – VIT SCORE Department
