Professional Summary

Integrated M.Tech graduate in Software Engineering from VIT Vellore with software engineering internship experience at Nokia. Experienced in developing and validating backend applications, troubleshooting software issues, investigating test failures, and improving code quality. Contributed to automated testing and build workflows, and developed full-stack applications and developer tools. Strong problem-solving foundation with a focus on writing reliable, maintainable code and following software development best practices.

Technical Skills

Programming Languages: Java, Python, SQL

Computer Science Fundamentals: Data Structures and Algorithms, Object-Oriented Programming

Backend Development: Spring Boot, FastAPI, Node.js, Express.js, REST APIs, JSON

Frontend Development: React.js, HTML, CSS

Databases: PostgreSQL, MySQL, MongoDB, ChromaDB

DevOps and Tools: Git, Docker, Jenkins, Linux, Gradle, Shell Scripting

Testing and Code Quality: Unit Testing, Module Testing, Debugging, Root-Cause Analysis, SonarQube, JaCoCo

Professional Experience

Software Engineering Intern – Nokia, Bangalore *Aug 2025 – Jun 2026*

- Resolved SonarQube code-quality findings in Java-based backend applications and validated fixes through automated builds and testing workflows.
- Executed Unit and Module Tests (UTMT), analyzed execution logs, investigated failing test cases, and performed root-cause analysis to troubleshoot application and environment issues.
- Integrated JaCoCo code coverage into Docker-based build and CI/CD workflows to automate coverage report generation and validation.
- Updated and validated Component and Applicability attributes in Reset Alarm definitions to support accurate alarm configuration and handling.
- Implemented and validated ECR rules for Reset Alarm definitions to match alarm parameters and target the intended alarm instance.
- Used Java, Gradle, Docker, Linux, and Shell Scripting to execute tests, investigate build failures, and troubleshoot runtime and environment issues.
- Automated development and testing setup tasks using Shell scripts, including environment configuration, test execution, and diagnostic workflows.

Projects

CodeForge AI – Full-Stack AI Developer Platform *React, TypeScript, FastAPI, PostgreSQL, ChromaDB, JWT, Docker*

- Developed a full-stack developer platform using React, TypeScript, and FastAPI with six modules for code generation, documentation, code review, repository analysis, RAG-based chat, and project management.
- Built a Retrieval-Augmented Generation (RAG) pipeline using code chunking, sentence-transformer embeddings, ChromaDB vector search, and LLMs, secured with JWT authentication, bcrypt password hashing, and per-user workspace isolation using PostgreSQL.

AI Code Reviewer – GitHub PR Review Automation *Python, Gemini API, GitHub Actions, GitHub REST API, Docker*

- Developed an automated GitHub pull-request review tool using Python, GitHub Actions, and REST APIs to analyze code changes and publish structured review findings with severity-based and security-focused checks.
- Implemented severity-based and security-focused code analysis, LLM response parsing, GitHub REST API integration, and retry/backoff handling, automated end-to-end using GitHub Actions.

House Hunt – Rental Property Application *React.js, Node.js, Express.js, MongoDB, REST APIs*

- Developed a full-stack rental property application using the MERN stack, with REST APIs for property listings, searching, and filtering.
- Built a React.js frontend connected to an Express.js and MongoDB backend, and deployed the application on Render.

Weather Forecasting Application *Java, Spring Boot, REST APIs, JSON*

- Developed a Java Spring Boot backend that integrates the OpenWeather API and provides real-time weather forecast data through REST endpoints.
- Parsed JSON responses from the external API into structured results and deployed the application on Render.

WasteScan – Automated Waste Sorting System *Python, OpenCV, Arduino*

- Built a computer-vision-based waste sorting system using Python and OpenCV for image processing, integrated with Arduino-controlled sorting hardware.
- Processed camera input to identify waste items and triggered the Arduino hardware to sort them automatically.

Education

Integrated M.Tech (B.Tech + M.Tech) in Software Engineering *2021 – 2026*
Vellore Institute of Technology (VIT), Vellore
CGPA: 7.88 | Graduation Year: 2026

Higher Secondary Education *2019 – 2021*
Narayana Junior College, Madhapur, Hyderabad | 92.8%

Secondary Education *2018 – 2019*
Dr. KKR's Gowtham Concept School, Hyderabad | GPA: 9.0

Certifications

- Agentic AI Certified Foundations Associate – Oracle University
- Microsoft Certified: Azure AI Fundamentals
- Full Stack Developer (MERN Stack) – SmartBridge / MongoDB Smart Internz
- Data Science – VIT SCORE Department
